

Omega 365 Release Notes

UID	Feature/Module	Description
WFL-301078	BIM & Digital Twin	Layers plugin: showing single checkbox when definition name and fragment name matches
WFL-297358	BIM & Digital Twin	Verify Files now show all documents for the model
WFL-300434	Contract Management	Added Project currency in Summary row, to eliminate confusion for users.
WFL-282511	Core Backend Technology	Added support for adding reports to bookmarks list in menu
WFL-302287	Core Frontend Technology	NT Grid Control: Last30days and Last14Days fixed.
WFL-300674	Core Frontend Technology	System Modules: Apps lookup header match correctly
WFL-302196	Core Frontend Technology	NT Tabs: updated urlFilter to work with ids/indexes
WFL-301090	Core Frontend Technology	GridMenuDropdown: shows correctly in different scopes
WFL-293491	Core Frontend Technology	Grid Layout: columns reordering works fluently
WFL-192819	Core Frontend Technology	NT: Added import backend resolves the IMPORT/UPDATE.
WFL-301833	Core Frontend Technology	NT SelectionControl: fixed dynamic data not displaying selected although they are selected
WFL-302534	Core Frontend Technology	o365setup: left side panel scrolls
WFL-301029	Core Frontend Technology	System-applications: bulk update enabled and functional on OFC column
WFL-302511	Core Frontend Technology	NT Iframe: changed context change event handling to messenger service
WFL-300797	Core Frontend Technology	SearchInput: search with debounce logic can be enabled with 'debounce' attribute
WFL-302259	Core Frontend Technology	NT BulkUpdate: now uses uniqueKey from dataObject fields
WFL-303229	Core Frontend Technology	RenderVueComponentAsString(component, props) added enabling rendering a vue component as string
WFL-300846	Core Frontend Technology	NT: Master Details should always include binding.
WFL-300435	Core Frontend Technology	NT AppDesigner: Moved alterView to iFrame
WFL-300224	Core Frontend Technology	NT Lookup improved to support setting multiselect values, code snippet added.
WFL-299465	Core Frontend Technology	NT Iframe: added context syncing between parent and iframe

Omega 365 Release Notes

UID	Feature/Module	Description
WFL-297389	Core Frontend Technology	NT: added select all from current view and keeping selection after load
WFL-300463	Core Frontend Technology	NT: Fixed by checking for language from predefined list
WFL-295935	Core Frontend Technology	DataLookup: multiselect mode keeps selection after filtering, when not used in grid
WFL-299783	Core Frontend Technology	NT Grid: Fixed formatting by adding multiplier
WFL-300608	Core Frontend Technology	NT ODataLookup: filtering and selecting will now select filtered out rows
WFL-300687	Core Frontend Technology	AppDesigner: when opening Master/Detail lookup does not throw errors
WFL-300692	Core Frontend Technology	Snippets: Data Object events show correct params order
WFL-300817	Core Frontend Technology	File upload was broken after changes. Fixed.
WFL-298928	Core Frontend Technology	NT Tabs: added ability to persist tab in URL
WFL-300404	Core Frontend Technology	OrgunitLookup, multiselect prop added
WFL-301135	Core Frontend Technology	Mega menu will not add context, if context if found in saved URL.
WFL-297361	Cost Management	Earned is updated on non measurable WBS, based on Earned Method (Planned or Actual), when WBS has Budget At Completion
WFL-301114	Cost Management	Measurable is shown as False on higher WBS levels in WBS Setup
WFL-194788	Home & General stuff	It is now possible to send custom emails from Omega365. App: E-mail messages. You can add specific persons one by one or add them in a group filtered by the role they have (and in which org unit). Need access to the System Setup-module to use the app.
WFL-289206	Org Structure, Roles & Access	Lookups already implemented on the NT version of persons-import
WFL-300426	Risk Management	Fixed access issue for audit trail in risk detail app
WFL-295064	Risk Management	<ul style="list-style-type: none">- Montecarlo export is now added in NT.- "Run simulation" button in montecarlo to work properly and not show warnings.- That matrix is now re-rendering if user adds filtering in the grid, or if the grid is refreshed.- Fixed placeholder error for risk properties.

Omega 365 Release Notes

UID	Feature/Module	Description
WFL-298927	Tooling, App Designer, DB-Manag	NT AppDesigner: Updated stored procedure for creating new files to refresh row.
WFL-141838	Tooling, App Designer, DB-Manag	NT DB-Manager will handle number precisely
WFL-292850	Tooling, App Designer, DB-Manag	Db manager. Execution time precision improved.
WFL-295419	Workflows	Removed "Target Object" input field. Changed standard lookup to ObjectLookup component.
